

Tree of New America

Free your city or county—and its participating pantries—from dependence on unnecessary third-party intermediaries for food sourcing and reporting.

Developed from Within the Pantry

Since January 2025, Tree of New America™ has worked alongside Mary's Kitchen Pantry in Anaheim to address the operational and reporting challenges associated with implementing SB 1383—from food diversion and recovery through redistribution to people experiencing food insecurity.

The result is the Tree of New America™ *Sustainability Ecosystem*™—a vertically integrated platform built around the relationships, workflows, food movement, and reporting needs of actual pantry operations, with compliance support and authorized municipal oversight extending outward from the pantry.

Explore investment in the planned Tree of New America™ Public Benefit Corporation.

Building infrastructure that supports SB 1383 compliance by connecting food recovery, pantry operations, community distribution & municipal oversight.

A New Model for Municipal Food Recovery

Qualifying pantries directly manage donor relationships and day-to-day food-recovery operations.

Cities and counties gain authorized visibility into documented activity across participating pantry nodes.

The result: independent pantry operations, connected accountability, and no unnecessary third-party intermediaries.
